

FOIL CONTAINER RANGE

foil container edges

Rolled Edge

The rolled edge provides additional strength and safety to the container.

Vertical Flange with Interrupted Curl

The vertical flange provides straight, strong edges that make the container suitable for use with a lid. The interrupted curl allows the corners of the container to be folded securely, locking the lid in place.

Hemmed Edge

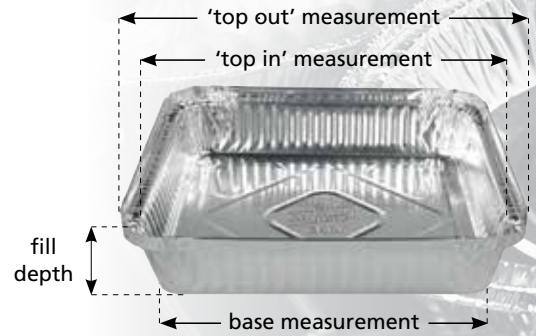

The hemmed edge is where the lip of the container folds out back onto itself to help protect the user from sharp edges.

Perforated (PF)

Perforated containers allow the contents to breathe at warm or hot temperatures.
