Food Packaging

2019 Catalogue

Rethinking our packaging design.

2025 Targets

As a signatory of the Australian Packaging Covenant (APCO) and the Packaging Council of New Zealand (PAC.NZ), we are on a journey towards creating a circular economy – we are committed to help Australia and New Zealand play their part in achieving the 2025 National Packaging Targets set out by the Environment Ministers.

We continue to work with our suppliers, customers and the public to achieve these key Targets:

- Design our packaging to be fully reusable, recyclable or compostable

- Use 30% of recycled content in our plastic packaging
- Eliminate problematic and unnecessary packaging through design, innovation or introduction of alternatives

We're making progress, and continue to work on a broad set of solutions to ensure that our products either remain in loops, or have the best possible opportunity to be recycled.

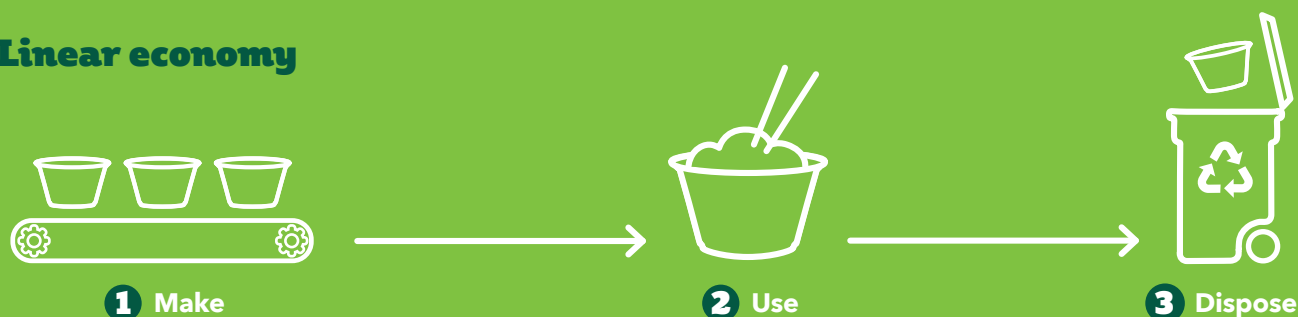

Designed with circularity in mind, our EcoSmart® products contain at least 30% recycled content, and are recyclable within our current infrastructure. Truly, the smartest choice for sustainability.

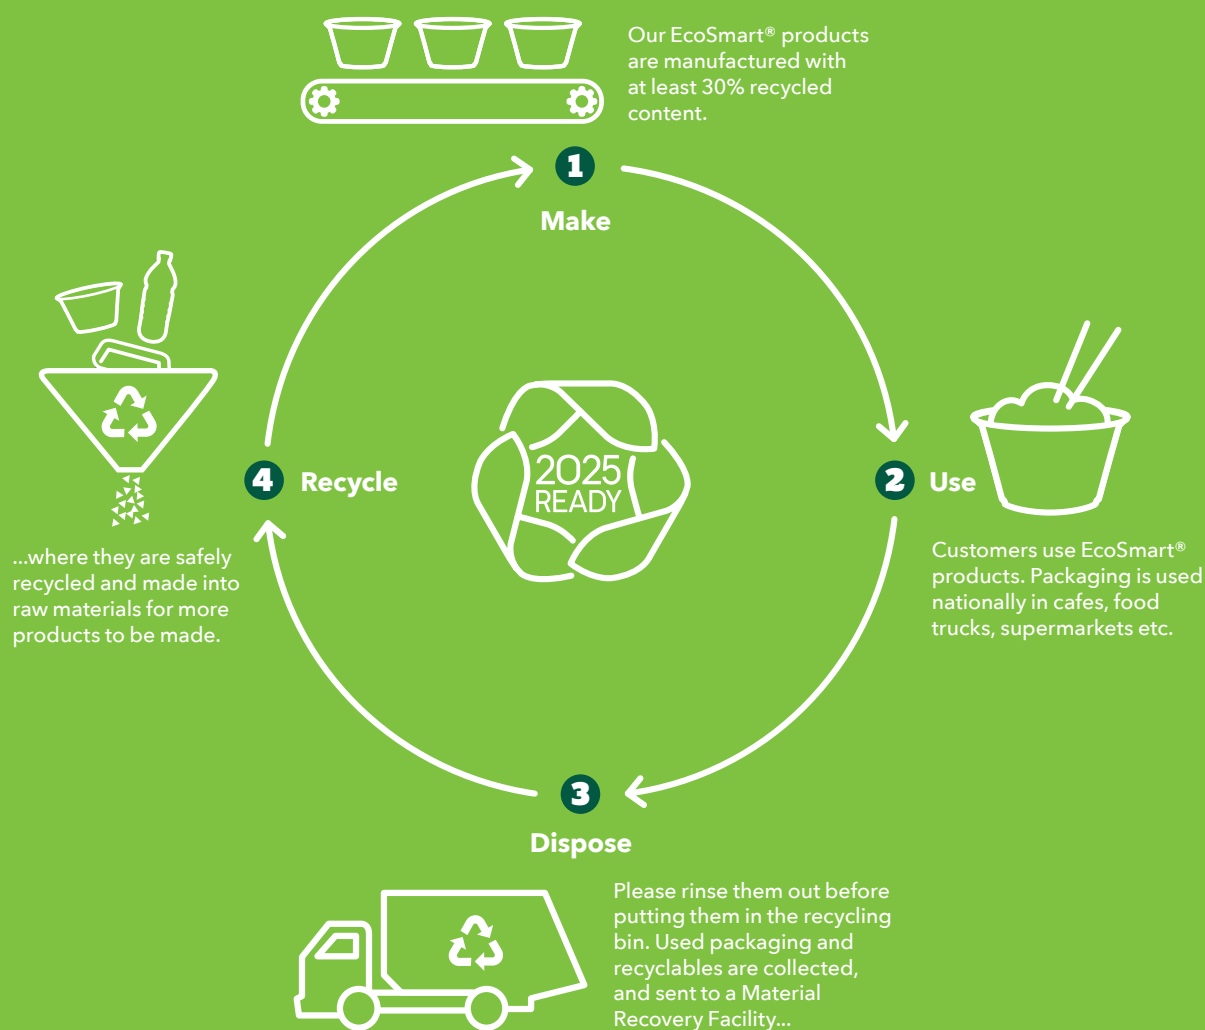

Linear vs Circular.

Unlike a traditional linear economy (make, use, dispose), a circular economy extracts the maximum value from materials and products while in use, then recovers and regenerates them. Here's how it works . . .

Linear economy

Circular economy

Food Bowls.

eco-smart Dome lid food bowls

Castaway® food bowls feature exceptional clarity and durability. Air-tight lids ensure freshness, and a double-split hinge allows containers to be laid open on a bench for quick and easy filling. Multiple sizes are available, with flat or dome lids offering extra space for fresh food applications and bakery items.

Applications: Salads, fresh foods, biscuits, cakes, nuts and sweets.

High clarity material

Air-tight seal keeps food fresh

Australian made in HACCP certified facilities

Made from at least 30% recycled content

Made from recyclable P.E.T.

FAQs.

Do EcoSmart® products contain BPA?

No. Our packaging products are free from BPA and BPS, and phthalates. We have, in fact, never used BPA in any of our products.

Why do EcoSmart® products use recycled content?

Castaway® is committed towards creating a circular economy – enabling more packaging to either remain in loops, or have the best possible opportunity to be recycled. The growing challenge of plastic in the environment has stressed the urgency to find solutions to reduce, reuse, recycle and recover ‘post-consumer’ plastic waste.

A more circular use of materials means lower costs and less waste. Making products using recycled contents often uses much less energy than producing the same products from raw or virgin materials. It means new sources of value for our customers and consumers, better risk management of raw materials, and improved approaches to the supply chain.

What’s the different between “recycled” and “recyclable”?

Recycled means the container already has contents from previous used material. In other words, recycled content means that the new product you’re using was made at least in part from content that has been recycled.

A product labelled as recyclable can go into the recycling bin and be re-processed into new products. EcoSmart® containers are both recycled and recyclable – the best of both worlds.

Why recycle?

Recycling has environmental, economic and social advantages. Recycling generates civic pride and environmental awareness.

It helps prevent environmental pollution, and save natural resources by conserving raw materials used in industry. Recycling reduces the amount of material dumped in landfill sites. Goods are used productively and prevented from becoming litter and garbage.

Is recycling easy?

Recycling is easy once you know how to. Please empty, and rinse all containers – make sure to remove any residual food or product waste before recycling to prevent cross-contamination.

Most local councils have a kerbside collection of recyclables that involve placing your recyclables out on the footpath for collection on a set day – just like general waste collection. Your yellow bin is for items that can be recycled.

What plastic can I recycle?

Different types of plastic must generally be kept separate for recycling. The Plastics industry Association has introduced a voluntary system of coding to help recyclers and the public identify the type of plastic. A number in a triangle identifies the plastic.

The two types of plastic most commonly recycled are PET, and HDPE (high density polyethylene). Other types of plastic are not generally recycled in Australia.

Every council has different standards and terminology in terms of what they’re able to recycle. If in doubt, leave it out or check your local council’s website.

If you have a specific question not covered here, please ask our Marketing Department.
